shutoff valves

900 Series

0–6000 psig Manual Shutoff Valves

Features

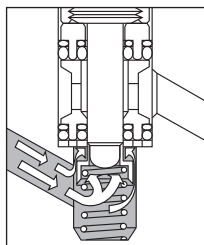

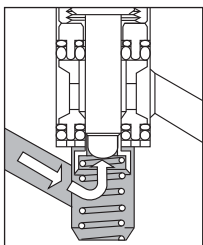

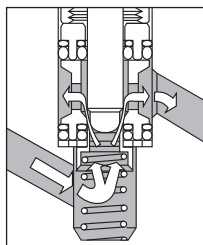

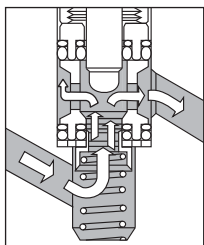

- Zero leakage
- Protected o-ring
- Full flow passages
- Freedom from wire drawing
- Panel mount standard
- Hand wheel or toggle handle

Technical Data

Body Construction Material	316 or 303 stainless steel
Stem Materials	316, 303 or 17-4 PH stainless steel
Gland Nut Materials	Brass or 17-4 PH stainless steel
O-ring Materials	Buna N, Neoprene or Viton®
Spring Material	302 stainless steel
Handle Materials	<ul style="list-style-type: none"> • Handle wheel: die-cast zinc, color blue • Toggle: forged steel, cadmium-plated
Leakage	<ul style="list-style-type: none"> • Internal: zero • External: zero
Operating Pressure	0–6000 psig (414 bar)
Proof Pressure	9000 psig (621 bar)
Burst Pressure	Over 24,000 psig (1,655 bar)
Temperature Range	–40° F to +350° F (–40° C to +177° C) <i>Based on o-ring material, see "How to Order".</i>
Connection Sizes	¼"–¾"
Actuating Force	<ul style="list-style-type: none"> • 900 Series: 20in/lbs • T900 Series: 20 lbs

Note: Proper filtration is recommended to prevent damage to sealing surface.

How it Works

 <p>Closed O-ring seal on smooth finish of stem provides leak-tight shut-off. Pressure on o-ring increases sealing effectiveness.</p>	 <p>Opening As stem is withdrawn, floating sleeve moves into position protecting the o-ring. Flow starts after 1½-turns of the handle.</p>	 <p>Throttling O-ring is protected by sleeve. Throttling is controlled across tapered section of the stem.</p>	 <p>Full Open Stem is withdrawn, permitting full flow with minimum pressure drop.</p>

shutoff valves

900 Series

Engineering Features

Standard Design

PCTFE or PTFE seat eliminates the need for o-ring seal and floating sleeve.

N-, B-, A900 Series design detail

Stem, seat and seal combine to provide accurate metering, full flow in either direction, and zero leakage shutoff.

N900 (nylon seat) Series valves are for general use. B900 (PCTFE seat) or A900 (PTFE seat) Series valves should be used for fluids not compatible with nylon or for service over +250° F.

900 Series

Dimensions

900 SERIES Handwheel Actuated

R900 SERIES Right Angle

Prefix part number for 900, R900, Y900 and Z900 Series with N, B, or A if bi-directional flow capability is required.

C900 SERIES Manifold Mounted

C900 Series—inlet size 0.203, outlet size 0.250. O-ring seals for manifold cavity are furnished by customer.

C900 SERIES Manifold Mounted Cavity

Cavity per AND10050-10 or SAE ½" straight thread connection (½-14UNF-3B) except as shown.

900 Series

Dimensions

T900 SERIES Toggle Actuated

Spring and ball detent positively position handle open or closed. Holes are provided in toggle cam and clevis to permit locking valve closed against tampering.

Handle arc is 90°. Valve is open when handle is parallel with stem, closed when handle is in a plane parallel with body. Closed position of handle may be positioned (360°) as required by "cracking" gland nut, positioning handle and retightening gland nut.

Stem and seat design permit rapid actuation of the toggle handle with a minimum of opening and closing shock to the system.

How to Order

Repair Kits

In normal service, the only part(s) which may require replacement is(are) the seal(s). A repair kit may be ordered by placing a "K/" in front of the complete part number (i.e. K/949T–2PP).

For Your Safety

It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation, and maintenance of these products. Material compatibility, product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.

9200 Series

Vacuum to 150 psig Plug Shutoff Valves

Features

- Leak proof in vacuum or pressure service
- No stem leakage
- Minimum pressure drop/straight through flow passage
- Convenient ball handle
- Very low turning torque
- Positive position indication

Technical Data

Body Construction Materials	Brass, 303 and 316 stainless steel
O-ring Materials	Buna N, Neoprene or Viton®
Operating Pressures	• Vacuum to 150 psig (10 bar) • 20 psig (1.38 bar) max in reverse flow
Proof Pressure	300 psig (21 bar)
Burst Pressure (Minimum)	Over 500 psig (34 bar)
Temperature Range	0° F to +400° F (–17.8° C to +204° C) <i>Based on o-ring material, see "How to Order".</i>
Connection Sizes	½"–1"
Leakage	Zero—internal and external

Note: Proper filtration is recommended to prevent damage to sealing surface.

9400 Series

0 to 3000 psig Miniature Shutoff Valves

Features

- Leak-proof shutoff
- No stem leakage
- Minimum pressure drop
- Color-coded handles
- Effortless opening & closing
- Knob or toggle handle
- Panel mount
- Metering stem
- Compact size
- Pipe and instrument tube fittings

Technical Data

Body Construction Materials	Brass or 316 stainless steel
Seat Materials	Buna N, Neoprene, PTFE or Viton®
Operating Pressure	0 to 3000 psig (207 bar)
Proof Pressure	0 to 4500 psig (310 bar)
Burst Pressure	Over 12,000 psig (828 bar)
Temperature Range	-80° F to +350° F (-62° C to +177° C) <i>Based on o-ring material, see "How to Order".</i>
Connection Sizes	1/8"–3/8"

Note: Proper filtration is recommended to prevent damage to sealing surfaces.

How it Works

Closed

Leakproof sealing is achieved by engaging a precision-machined stem into a captive nylon seat. The seat cannot be damaged by back pressure. The shoulder, on a stainless steel stem, seats on a metal washer, which in turn is forced against a resilient, non-galling nylon seat to affect a leak-tight seal against the stem.

Fine Flow Control

No flow occurs during the first fractional turn of the handle. Precise flow control begins as the stem is withdrawn and continues across the 2° tapered portion of the stem until the handle has been rotated approximately two turns in the opening direction.

Non-critical Flow Control

As the stem is withdrawn further, flow continues across the 10° taper of the stem until full opening is reached.

Full Open

Stem travel past full open position is prevented by a solid, positive metal stop. The handle cannot inadvertently be unscrewed. The o-ring surrounding the stem prevents external leakage. Stem threads are isolated from the flow path to permit lifetime lubrication and to avoid contamination of the fluid.

TM9400 Series Dimensions & Performance Data

Toggle handle for quick snap to open or close. Levers up approximately 90° to full open position.

Adjustment nut for metering desired flow. May be set and locked to limit valve opening to any point between closed and full open. Adjustable when valve is open or closed.

Locked ring locks adjustment nut in position.

Panel mount thread protector (removable).

O-ring prevents external leakage past stem.

Nylon seat provides leakproof shutoff without galling. (PTFE seat available.)

Tapered stem offers excellent metering characteristics. (See "Typical Flow Curves", next page.)

D9400 Series

0–3000 psig Miniature Pneumatically Actuated Valves

Features

- Zero leakage
- Anodized aluminum “top works” is corrosion resistant
- Actuator (pilot) port rotates for easy installation and locks with jam nut
- Optional metering adjustment resets maximum flow
- Provides preset metering for normally closed valves
- Pipe and instrument tube fittings

Technical Data

Body Construction Materials	Brass or 316 stainless steel
Stem Material	316 stainless steel
Diaphragm housing	Anodized aluminum, color blue
Seal materials	Buna N, Neoprene, PTFE or Viton®
Diaphragm Materials	Dacron®/Buna N
Operating Pressure	3000 psig (207 bar)
Proof Pressure	4500 psig (310 bar)
Burst Pressure	12,000 psig (828 bar)
Actuator Pressure	30 to 200 psig (2 to 14 bar)
Temperature Range	–100° F to +400° F (–73° C to +204° C) <i>Based on o-ring material, see “How to Order”.</i>
Connection Sizes	¼"

Note: Proper filtration is recommended to prevent damage to sealing surface.

How it Works

Full Open

Stem travel is stopped in the open position by metal-to-metal shoulders. O-ring surrounding the stem prevents external leakage. Actuator is completely removed from flow path to avoid contamination of the fluid or of the actuator

Opening to Metering Stop

No flow occurs during first portion of stem travel. Precise metering positions can be preset with the optional metering adjustment, thus positioning stem for the desired rate of flow.

Close

Absolutely leakproof sealing is achieved by engaging precision machined stem into a captive seat. Seat cannot be damaged by back pressure. Shoulder on stainless steel stem seats on metal washer, which in turn is forced against resilient, non-galling seat to affect a dead-tight seal against the stem.

Normally open	0-1000 psi (PTFE)
	0-3000 psi (Fluorogold®)

Please consult your Circle Seal Controls distributor or our factory for information on special connections, materials, larger sizes, o-rings, operating pressures and temperature ranges.

Repair Kits

In normal service, the only part(s) which may require replacement is(are) the seal(s). A repair kit may be ordered by placing a "K/" in front of the complete part number (i.e. K/D9420B-4CC-1).

For Your Safety

It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation, and maintenance of these products. Material compatibility, product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.

9500 Series

0–3000 psig Shutoff Valves

Features

- Compact size, fast-acting
- Leakproof in vacuum or pressure service
- Positive position indication & handle stop
- Bleed hole in the plug vents the trapped fluids downstream
- No packing to adjust, o-ring seal to atmosphere
- Color-coded handles

Technical Data

Body Construction Materials	Brass, 316 stainless steel
O-ring Materials	Buna N, Neoprene or Viton®
Operating Pressures	3000 psig (207 bar)
Proof Pressure	4500 psig (310 bar)
Burst Pressure	6000 psig (414 bar)
Maximum Reverse Pressure	200 psig (14 bar)
Leakage	Zero—internal and external

Note: Proper filtration is recommended to prevent damage to sealing surface.

O-RING MATERIAL, TEMPERATURE RANGE & HANDLE COLOR

- 59** Buna N (0° F to +250° F), blue handle
- 33** Neoprene (0° F to +300° F), green handle
- 32** Viton® (0° F to +400° F), red handle

BODY MATERIAL

- B** Brass
- T** 303 stainless steel

VENT PORT

Q*Downstream side (optional)

CONNECTIONS

- M** Male pipe
- F** Female pipe
- C** Gyrolok® tube fittings

VALVE SIZE

- 1** 1/8" pipe
- 2** 1/4" pipe
- 4** 1/4" tube
- 6** 3/8" tube

* A 0.040 diameter vent hole in the plug and body allows downstream pressure to vent to atmosphere when the valve is in the closed position. If another vent hole size is required, specify the hole size desired in parenthesis after the "Q" in the part number (example: "Q(118)" equals a 0.118 diameter hole). The o-ring blocks the bleed port when the valve is open. The maximum operating pressure with a bleed port is 200 psig.

** Operating torque at 500 psig: 10 in-lbs maximum for -1PP, -1MM, -2MM and -6CC; 20 in-lbs maximum for -2PP

Place the valve in line so that the flow arrow points in the direction of flow.

Please consult your Circle Seal Controls distributor or our factory for information on special connections, materials, larger sizes, o-rings, operating pressures and temperature ranges.

MV92 Series

0–3000 psig Micro-metering Fingertip Valves

Features

- Precision tapered needle/0.020 orifice provides ultimate in fine metering sensitivity.
- Unique “spline” device prevents stem withdrawal from body until gland nut is loosened.
- Packing below threads prevents system contamination.
- Permanent lubrication assures trouble-free operation.

Technical Data

Body Construction Material	316 stainless steel
Gland Nut Material	316 stainless steel
Stem Seals Material	PTFE
Operating Pressures	0 to 3000 psig (207 bar)
Temperature Range	–20° F to +400° F (–29° C to +204° C)
Connection Sizes	1/8"–3/8"

Note: Proper filtration is recommended to prevent damage to sealing surface.

How it Works

Full Open

At approximately 10 handle turns, the valve is full open. As the needle is returned to the seat, the needle guide maintains pin-point concentricity of the needle with the seat to maintain absolute uniformity of flow control

Micro-metering

The body is graduated in handle turns. The handle has 25 graduations per turn for precise, repeatable flow calibration. The handle setscrew allows zero flow/shutoff point to be reset in the field.

Closed

The stainless steel needle seals on the precision machined, stainless steel seat. The spring-loaded stem prevents damage to the needle by providing a full, ineffective handle turn before bottoming.

Connection Sizes	½"–1"
Leakage	All series and actuators: bubble-tight

Note: Proper filtration is recommended to prevent damage to sealing surface.

How it Works

Full Open

The relaxed PTFE is fully contained. With no obstructions, the stem develops full hole diameter for high Cv. The body can be in-line welded without being disassembled or requiring weld-neck extensions.

Throttling

By advancing the stem inward, the valve takes a configuration identical to a needle or tapered plug-type valve and offers comparable control. Soft seat valves are not usually capable of enduring high pressure drop in this mode of operation as their seat faces wire-draw, erodes, or reverse pressure drop blows the seal out. DYNAFLOW® valves give you trouble-free throttling.

Metering

By advancing the throttling configuration inwardly, the valve now offers a type of metering not common to either hard or soft seat valves. Precision fitted internal diameters give you this excellent metering control. The seat is fully contained and is protected from the effects of erosion, washout, nibbling or surge.

Ultra-fine Metering

As the inward motion continues, the clearance between the tapered end of the spindle and the body seat is further reduced; the space between the seat housing and the flat body seat may be infinitely restricted to provide ultra-fine metering.

Final Absolute Shutoff

During final closing, the PTFE seat is mechanically compressed by relative motion between the spindle and the seat housing. The seat becomes elastic and conforms to the sealing area regardless of the line pressure. Since the seat is pressurized independent of line pressure, it remains absolute under all conditions. The process is reversible, since the seat is elastic under pressure and returns into its encapsulated state as mechanical compression is relaxed.

MV/ES 12 & 60 Series

ES Series DYNAFLOW® Valves :Globe Pattern

Extended Stem for Extreme Service: -452° F to +450° F (-269° C to +232° C)

The basic valve body, seating configuration, stem packing and body parts are identical to the MV Series. However, the ES Series utilizes a long cylindrical barrel and stem to insulate the handle and the stem packing area from the line fluid. The extended barrel and stem provide ample heat dispersion so the valve can be operated even though the fluid passing through the main portion of the valve may be at extreme temperatures.

How it Works

Full Open

The relaxed Teflon® is fully contained. With no obstructions, the stem develops full hole diameter for high Cv. The body can be in-line welded without being disassembled or requiring weld-neck extensions.

Throttling

By advancing the stem inward, the valve takes a configuration identical to a needle or tapered plug-type valve and offers comparable control. Soft seat valves are not usually capable of enduring high pressure drop in this mode of operation as their seat faces wire-draw, erodes, or reverse pressure drop blows the seal out. DYNAFLOW® valves give you trouble-free throttling.

Metering

By advancing the throttling configuration inwardly, the valve now offers a type of metering not common to either hard or soft seat valves. Precision fitted internal diameters give you this excellent metering control. The seat is fully contained and is protected from the effects of erosion, washout, nibbling or surge.

Ultra-fine Metering

As the inward motion continues, the clearance between the tapered end of the spindle and the body seat is further reduced; the space between the seat housing and the flat body seat may be infinitely restricted to provide ultra-fine metering.

Final Absolute Shutoff

During final closing, the Teflon® seat is mechanically compressed by relative motion between the spindle and the seal housing. The seat becomes elastic and conforms to the sealing area regardless of the line pressure. Since the seat is pressurized independent of line pressure, it remains absolute under all conditions. The process is reversible, since the seat is elastic under pressure and returns into its encapsulated state as mechanical compression is relaxed.

1"	2.75	3.00	4.00	1.75	2.75	15.50	2.50	2.50	1.87	5.6

* In Aminco™ end fittings only.

** Cv based on female pipe ends.

CMV/CES 12 & 60 Series

Dimensions—CES Series DYNAFLOW® Valves

Extended Stem for Extreme Service: -452° F to +450° F (-269° C to +232° C)

The basic valve body, seating configuration, stem packing and body parts are identical to the CMV Series. However, the CES Series utilizes a long cylindrical barrel and stem to insulate the stem packing area from the line fluid. The extended barrel and stem provide ample heat dispersion so the valve can be operated even though the fluid passing through the main portion of the valve may be at extreme temperatures.

Globe Dimensions (inches): CES60 & CES12 Series

CMV/CES 12 & 60 Series

How to Order

Please consult your Circle Seal Controls distributor or the factory for information on special connections, operating pressures and temperature ranges.

Repair Kits

In normal service, the only part(s) which may require replacement is(are) the seal(s). A repair kit may be ordered by placing a "K/" in front of the complete part number (i.e. K/MV12T-06B).

For Your Safety

It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation, and maintenance of these products. Material compatibility, product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.

DYNAFLOW® is a registered trademark of Circle Seal Controls.

Teflon® is a registered trademark of the DuPont Company.

Aminco™ is a trademark of American Instrument Company.

CIRCOR

INSTRUMENTATION TECHNOLOGIES

CIRCOR Instrumentation Technologies (CIT) is the logical choice for fluid control solutions. We provide the lowest cost of ownership, offering the best in class reliability and availability of our products. We have global coverage, delivering value in the form of local, flexible service to meet our customer's needs. CIT is a product group specializing in instrumentation with orifice sizes typically up to 2".
